

NEWBORN ARM FOR ULTRASOUND-GUIDED IV TRAINING

PRODUCT NUMBER: 2750

DESCRIPTION:

Baby Arm is an anatomically correct, highly realistic arm phantom that can be used for ultrasound-guided IV training for nurses and physicians.

The phantom is an ideal investment to learn the skills of giving an intravenous injection on a baby's arm under ultrasound guidance.

SKILLS:

- Ultrasound-guided venous access skills training
- Probe manipulation
- Recognition of anatomical structures

CHARACTERISTICS:

FEATURES:

MORE THAN SIMULATORS S.L.

- Mimics like a baby arm
- Great skin quality
- Anatomically correct Blood vessels
- Compatible with Ultrasound imaging
- Tested for IV in our labs
- The baby arm phantom is specifically designed for ultrasound-guided needle placement without involving the blood drawing procedure.
- The phantom is an ideal investment to learn the skills of giving an intravenous injection on a baby's arm under ultrasound guidance and it is made from durable and long-lasting materials.
- The blood vessels are prefilled with an ultra-soft rubber-like material so the phantom will never leak or require any extra blood mimicking fluid.

INCLUDE:

- 1 Ultrasound-compatible newborn arm trainer
- 1 Box
