

STAN STAGE IV PRESSURE ULCER

PRODUCT NUMBER: 1451

DESCRIPTION:

Stan™ Stage 4 Pressure Injury Model features a large sacral Stage 4 pressure injury and Stage 3 pressure injury with subcutaneous fat and granulation tissue. This model also features eschar, subcutaneous fat, undermining, tunneling, slough, eschar and exposed bone with osteomyelitis.

SKILLS:

- Placement and removal of dressings for use with negative pressure wound therapy devices
- Demonstrate wound cleansing, classification and staging, as well as the measurement of wounds.
- Build competency and confidence in this challenging wound care scenario

CHARACTERISTICS:

Stan™ Stage 4 Pressure Injury Model features a large sacral Stage 4 pressure injury with eschar, subcutaneous fat, undermining, tunneling, slough, eschar and exposed bone with osteomyelitis.

This model also includes a Stage 3 pressure injury with subcutaneous fat and granulation tissue. The large size and depth of the Stage 4 pressure injury, as well as the undermining and tunneling, make it ideal for patient simulation. It's also perfect for practicing the proper dressing and preparation of a large wound for use with a negative pressure wound therapy device. The Stage 3 pressure injury is positioned so that the Stage 4 can be dressed by itself or a "bridging" dressing can be applied to the Stage 4 and Stage 3 to demonstrate and practice this skill.

INCLUDE:

- 1 Stan Stage IV model
- 1 Carrying case (option)
