

Ultrasound-guided axillary brachial plexus nerve block simulator

PRODUCT NUMBER: 4328

DESCRIPTION:

The axillary brachial plexus simulator facilitates the acquisition of knowledge and skills for performing the axillary brachial plexus block. It allows you to practice the injection, recognise the anatomy of the axillary brachial plexus and accurately place the needle tip under ultrasound guidance.

SKILLS:

- Ultrasound-guided injection
- Nerve block
- Intravenous/arterial access

CHARACTERISTICS:

GENERAL:

- The fabric of the simulators is self-repairing and durable.

- Fabric is suitable for use with any ultrasound/ultrasound equipment.
- The vessels depicted are solid, requiring no liquid filling for use. This eliminates liquid leakage, providing a more aseptic learning environment.
- Easy cleaning and storage, simply remove the ultrasound gel completely and remove moisture from the tissue.
- The simulator incorporates a rigid tray for fluid collection.
- Quick and efficient set-up.

ANATOMY DEPICTED:

- Radial nerve
- Ulnar nerve
- Median nerve
- Musculocutaneous nerves
- Axillary artery
- Axillary vein
- Deltoid muscle
- Biceps muscle
- Coracobrachial muscle
- External references:
- Axillary fossa
- Pectoralis muscle
- Trapezius
- Biceps brachii
- Deltoid
- The anatomically and proportionally correct internal structures faithfully mimic human anatomy scans.

INCLUDE:

- Ultrasound guided axillary brachial plexus nerve block simulator
- 1 Insert (pre-installed)
- Rigid base for support and fluid collection
- Dust bag
- Carrying case
